

Micro Line Mixer Example Diagram

Parallel effect loop configuration with Mastermind PBC/6X

This diagram shows how to use the Micro Line Mixer and Mastermind PBC/6X together to route 3 effects in series and 3 in parallel.

The parallel effects are placed in the amp's effect loop.

The insert loop should be placed between series loops (1, 2 and 3) and parallel loops (4, 5, and 6), and the insert loop should be kept on at all times. Use the Lock feature to lock the insert loop in the "on" state.
